SPC Day 1 Categorical Outlook

SPC MCD #1729

MESOSCALE DISCUSSION 1729
NWS STORM PREDICTION CENTER NORMAN OK
1240 PM CDT FRI AUG 16 2013

AREAS AFFECTED...A PORTION OF SRN AND SERN TX

CONCERNING...SEVERE POTENTIAL...WATCH UNLIKELY

VALID 161740Z - 161945Z

PROBABILITY OF WATCH ISSUANCE...5 PERCENT

SUMMARY...A FEW STORMS DEVELOPING SWD THROUGH A PORTION OF SRN AND SERN TX THIS AFTERNOON MAY BECOME CAPABLE OF PRODUCING ISOLATED STRONG TO MARGINALLY SEVERE WIND GUSTS. OVERALL THREAT DOES NOT APPEAR SUFFICIENT TO WARRANT A WW.

DISCUSSION...EARLY THIS AFTERNOON AN EXPANSIVE OUTFLOW BOUNDARY STRETCHES FROM HUNTSVILLE IN SERN TX WSWWD TO JUST NORTH OF SAN ANTONIO THEN FARTHER WEST NEAR SANDERSON...AND IS MOVING SOUTH AT AROUND 20 KT. MOSTLY CLEAR SKIES HAVE PROMOTED STRONG INSOLATION SOUTH OF THIS FEATURE...WITH SFC TEMPERATURES CLIMBING INTO THE 90S ALONG WITH LOW 70S DEWPOINTS. DESPITE THE HIGH THETA-E BOUNDARY LAYER AIR...THERMODYNAMIC PROFILES ARE UNIMPRESSIVE WITH MLCAPES LIMITED TO 1500-2000 J/KG DUE TO WARM AIR ALOFT AND WEAK MIDDLE-LEVEL LAPSE RATES. DESTABILIZATION AND CONVERGENCE ALONG THE OUTFLOW BOUNDARY HAVE FOSTERED INITIATION OF SCATTERED STORMS OVER SCNTL TX. THE STEEPENING LOW-LEVEL LAPSE RATES MAY CONTRIBUTE TO A THREAT OF ISOLATED STRONG WIND GUSTS WITH SOME OF THE STORMS. HOWEVER...WEAK VERTICAL SHEAR AND MID-LEVEL LAPSE RATES SUGGEST AN ORGANIZED SEVERE EVENT IS UNLIKELY.

..DIAL/KERR.. 08/16/2013
